

LABORATORY RECORD

Course :	Full Stack Web Development
Course Code:	23CM4121
Experiment No.:	1
Student Name:	R. Srivalli
Roll No.:	A24126552108
Date:	25-08-2026

1. TITLE

Design Static Webpage using HTML Components

2. AIM

To design and develop a **static webpage** using HTML components, demonstrating the use of headings, paragraphs, text formatting, lists, hyperlinks, tables, images, and semantic elements to create a well-structured and informative webpage.

3. OBJECTIVE

- To understand the basic structure and syntax of an **HTML5 document**.
 - To create a static webpage using **headings, paragraphs, and text-formatting elements**.
 - To implement **ordered and unordered lists** for displaying information.
 - To create and use **hyperlinks** for navigation and external websites.
 - To display student information using **HTML tables**.
 - To insert images using the ** element** with appropriate alternative text.
 - To use **semantic HTML elements** such as <header>, <nav>, <section>, and <footer> for proper webpage structure.
 - To demonstrate **superscript, subscript, bold, italic, underline, strong, and emphasized text**.
 - To develop a simple, structured, and informative **ANITS college webpage using HTML components**.
-

4. THEORY

HTML (HyperText Markup Language) is the standard markup language used to create and structure webpages. It uses elements and tags to define different types of content such as headings, paragraphs, lists, tables, images, and hyperlinks.

HTML5 provides a simple and meaningful document structure using elements such as <header>, <nav>, <section>, and <footer>. These semantic elements help organize webpage content clearly and improve readability.

HTML also supports text formatting using elements such as , , , <i>, and <u>. Lists can be created using for unordered lists and for ordered lists. The <table> element is used to represent information in rows and columns, while the element is used to display images with alternative text.

Hyperlinks are created using the <a> element and can be used for navigation within the webpage or to access external websites. In this experiment, these HTML components are combined to create a structured and informative ANITS College Information Portal.

5. ALGORITHM / PROCEDURE

1. Create a basic HTML5 document using the <!DOCTYPE html> declaration.
 2. Add the title and heading for the ANITS College Information Portal.
 3. Create a header containing the college name and introductory information.
 4. Add a navigation bar with links to different sections of the webpage.
 5. Create an About ANITS section using headings and paragraphs.
 6. Add the list of academic departments using an unordered list.
 7. Create an Academic Programs section using an ordered list.
 8. Create a student information table using <table>, <tr>, <th>, and <td> elements.
 9. Insert the ANITS logo using the element with appropriate alt text.
 10. Add external hyperlinks to the official ANITS website and Google.
 11. Demonstrate different HTML text-formatting elements, including superscript and subscript.
 12. Create a Contact Information section using headings, paragraphs, and hyperlinks.
 13. Add a footer containing copyright and laboratory information.
 14. Save the HTML file and open it in a web browser.
 15. Verify that all webpage components and hyperlinks are displayed and functioning correctly.
-

7. CODE EXPLANATION

S.No.	Component	Explanation
1	<!DOCTYPE html>	Declares HTML5 document.
2	<head>	Contains page metadata and title.
3	<header>	Displays college heading and introduction.
4	<nav>	Provides navigation links.
5	<section>	Divides content into sections.
6	<h1>–<h3>	Defines different heading levels.
7	<p>	Displays paragraphs.
8	, , <i>, <u>	Apply text formatting.
9	, ,	Create unordered and ordered lists.
10	<a>	Creates hyperlinks.
11	<table>, <tr>, <th>, <td>	Creates and organizes the student table.
12		Displays the ANITS logo.
13	alt	Provides alternative text for the image.
14	<sup>, <sub>	Displays superscript and subscript text.
15	<hr>	Separates different sections.
16	<footer>	Displays copyright and laboratory information.

8. TEST CASES AND EXECUTION DATA

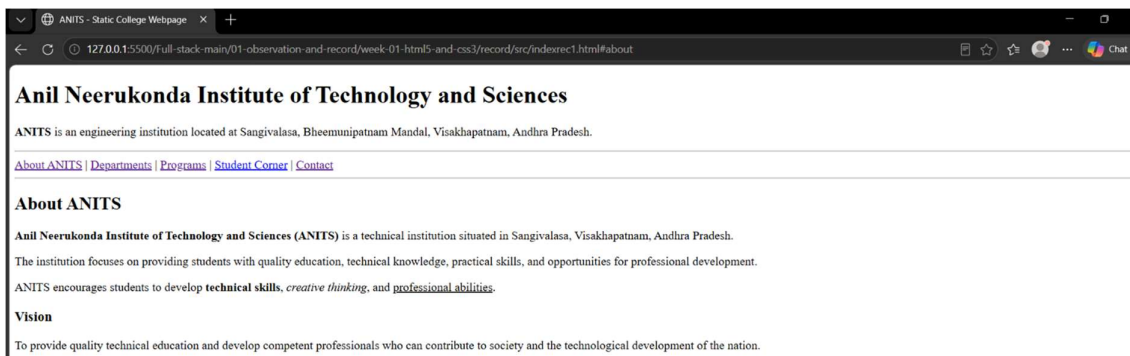

Test Case 1 – Page Loading

Input / Action	Expected Result	Status
Open the HTML file in a browser	ANITS webpage loads successfully	Pass

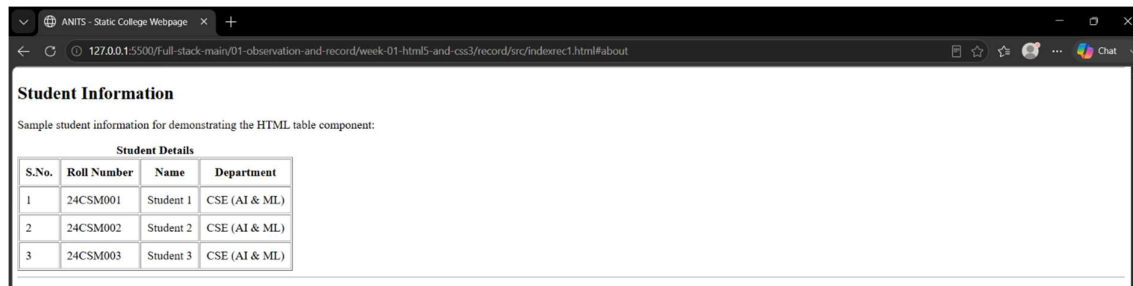

Test Case 2 – Navigation Links

Input / Action	Expected Result	Status
Click the navigation links	Corresponding webpage sections are displayed	Pass

Test Case 3 – Student Information Table

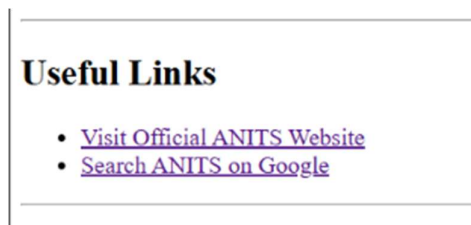

Input / Action	Expected Result	Status
Open the Student Information section	Student details table is displayed correctly	Pass

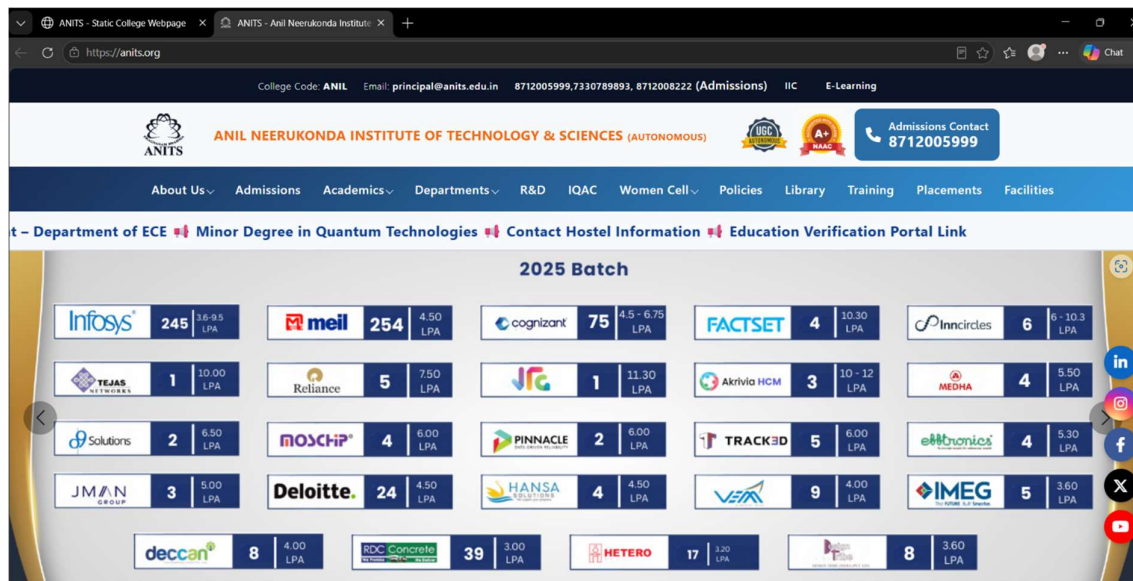

Test Case 4 – Official Website Link

Input / Action	Expected Result	Status
Click the Official ANITS Website link	Official ANITS website opens successfully	Pass

Before clicking on the link

After clicking

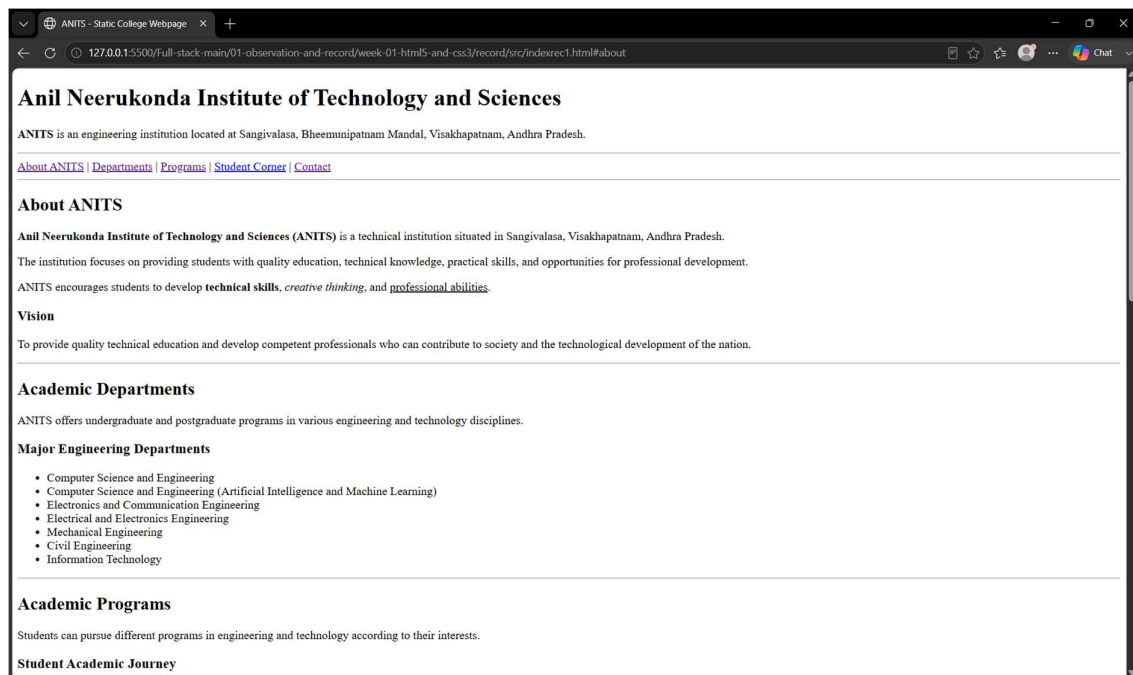

Test Case 8 – Invalid Hyperlink

Input / Action	Expected Result	Status
Click an invalid/broken hyperlink	Requested webpage should not open correctly	Fail

9. OUTPUT

Academic Programs

Students can pursue different programs in engineering and technology according to their interests.

Student Academic Journey

1. Choose an appropriate engineering discipline.
2. Learn fundamental engineering concepts.
3. Develop practical and technical skills.
4. Participate in laboratory and project work.
5. Complete academic and project requirements.

Student Information

Sample student information for demonstrating the HTML table component:

S.No.	Roll Number	Name	Department
1	24CSM001	Student 1	CSE (AI & ML)
2	24CSM002	Student 2	CSE (AI & ML)
3	24CSM003	Student 3	CSE (AI & ML)

ANITS Campus

The ANITS campus provides an academic environment for learning, laboratory work, projects, and extracurricular activities.

Output3:

10. RESULT

The ANITS College Information Portal was successfully designed and developed using HTML components. The webpage implements the required headings, paragraphs, text formatting, ordered and unordered lists, hyperlinks, tables, images, and semantic HTML elements. The execution and test cases confirmed that the implemented HTML components function as expected, resulting in a well-structured and informative static college webpage.
